

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) An image display method for displaying a plurality of images on a display means, wherein;

based on at least one display protocol sequence that defines an execution order of a plurality of display protocols for the plurality of images, in which a plurality of display protocols that define a display layout of [[a]] said plurality of images are lined up in a predetermined order, the display layout of [[a]] said plurality of images is switched by switching said display protocols by the predetermined order defined in the display protocol sequence and said plurality of images are displayed on said display means using the switched display protocol.

2. (Currently Amended) An image display method according to claim 1, ~~therein~~ wherein;

for cases in which there are multiple display protocol sequences, the desired display protocol sequence can be selected, and based on the selected display protocol sequence, said plurality of images are displayed on the display means.

3. (Original) An image display method according to claim 2, wherein;
said plurality of display protocol sequences can be switched, and based on the display protocol sequence switched to, said plurality of images are displayed on the display means.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

4. (Original) An image display method according to claim 1, 2, or 3, wherein;
the display protocol sequences are created based on the predetermined conditions, and
based on said created display protocol sequence, said plurality of images are displayed on the
display means.

5. (Previously Presented) An image display apparatus for displaying on a
display means a plurality of images, comprising:

a memory means for remembering at least one display protocol sequence that defines an
execution order of a plurality of display protocols for the plurality of images, in which a plurality
of display protocols that define a display layout of a plurality of images are lined up in a
predetermined order, and

control means which by switching, based on said at least one display protocol sequence,
the plurality of display protocols by the predetermined order defined in the display protocol
sequence, switches the display layout of a plurality of images and displays said plurality of
images on the display means using the switched display protocol.

6. (Original) An image display apparatus according to claim 5, further
comprising:

input means for receiving selection of the desired display protocol sequence, for cases in
which multiple display protocol sequences are remembered in said memory means, wherein;

based on the selected display protocol sequence in said input means, the control means
displays on the display means the plurality of images.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

7. (Original) An image display apparatus according to claim 6, wherein;
the control means can switch the multiple display protocol sequences, and based on the
switched to display protocol sequence, said plurality of images is displayed on the display
means.
8. (Original) An image display apparatus according to claim 5, 6, or 7, wherein;
based on the predetermined conditions, the control means creates the display protocol
sequences, and
based on said created display protocol sequence, said plurality of images are displayed on
the display means.
9. (Previously Presented) A computer-accessible storage medium on which a
program that causes a computer to execute the image display method in which a plurality of
images are displayed on the display means, wherein;
said program contains a display procedure for, based on at least one display protocol
sequence that defines an execution order of a plurality of display protocols for the plurality of
images, in which a plurality of display protocols that define a display layout of a plurality of
images are lined up in a predetermined order, switching the display layout by switching said
display protocols by the predetermined order defined in the display protocol sequence and
displaying on the display means the plurality of images using the switched display protocol.
10. (Original) A computer-accessible storage medium according to claim 9,
further comprising:

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

a receiving procedure for receiving a selection of the desired display protocol sequence for cases in which there are multiple display protocol sequences, wherein;

based on the selected display protocol sequence, said display procedure displays the plurality of images on the display means.

11. (Original) A computer-accessible storage medium according to claim 10, further comprising:

a switching procedure for switching the multiple-display protocol sequences, wherein;

based on the display protocol sequence switched to, said display procedure displays the plurality of images on the display means.

12. (Original) A computer-accessible storage medium according to claim 9, 10, or 11, further comprising:

a procedure for creating, based on the predetermined conditions, said display protocol sequences, wherein;

based on the created display protocol sequence, said display procedure displays the plurality of images on the display means.

13. (Previously Presented) The method of claim 1, wherein said at least one display protocol sequence includes at least two of the plurality of display protocols to be arranged in a predetermined temporal order, said at least two of the plurality of display protocols each individually comprising a predetermined spatially ordered arrangement of images selected from said plurality of images.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

14. (Previously Presented) The apparatus of claim 5, wherein the control means controls at least two of the plurality of display protocols to be arranged in a predetermined temporal order, said at least two of the plurality of display protocols each individually comprising a predetermined spatially ordered arrangement of images selected from said plurality of images.

15. (Previously Presented) The medium of claim 9, wherein said at least one display protocol sequence includes at least two of the plurality of display protocols to be arranged in a predetermined temporal order, said at least two of the plurality of display protocols each individually comprising a predetermined spatially ordered arrangement of images selected from said plurality of images.

16. (Previously Presented) The method of claim 2, wherein said display protocol sequence includes at least two of the plurality of display protocols to be arranged in a predetermined temporal order and wherein the display protocol sequence can be switched to a different display protocol sequence prior to reaching a last display protocol of the display protocol sequence.

17. (Previously Presented) The apparatus of claim 6, wherein the control means controls at least two of the plurality of display protocols to be arranged in a predetermined temporal order and wherein the display protocol sequence can be switched to a different display protocol sequence prior to reaching a last display protocol of the display protocol sequence.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Application No. 09/774,877

PATENT APPLICATION
Attorney Docket No. Q62891

18. (Previously Presented) The medium of claim 10, wherein said display protocol sequence includes at least two of the plurality of display protocols to be arranged in a predetermined temporal order and wherein the display protocol sequence can be switched to a different display protocol sequence prior to reaching a last display protocol of the display protocol sequence.

19. (Previously Presented) The method of claim 1, wherein the display protocols are switched automatically based on the display protocol sequence.

20. (Previously Presented) The apparatus of claim 5, wherein the control means switches the display protocols automatically based on the display protocol sequence.

21. (Previously Presented) The medium of claim 9, wherein the display protocols are switched automatically based on the display protocol sequence.
